

- 2) Right-click on the column heading for the field you want. Choose TURN FIELD OFF from the dropdown menu.

### A Few Things to Note:

Exporting attributes to PDF can lead to performance problems when viewing the file in supported PDF readers.

Limit exported fields to one layer per map.

### Georeferencing and PDF:

Adobe Acrobat supports a new version of PDF that allows for the encoding of map coordinate systems and georeferencing information in the PDF file.

This option will record each data frame's georeferenced information inside the PDF file.

When the georeferenced PDF is opened in Adobe, the user can access geospatial functions such as coordinate readout and find XY.

### In ArcMap:

- 1) Click FILE > EXPORT MAP
- 2) Click the ADVANCED tab in the OPTIONS box
- 3) Check the box next to EXPORT MAP GEOREFERENCE INFORMATION

PDF files containing georeference information are still compatible with earlier versions Adobe Acrobat and Reader.
